

Fanoos Collection

Tradition meets trendiness

BEGA

Das gute Licht.

Outdoor lighting at **its best**

As a manufacturer of high-quality outdoor luminaires, BEGA has been dedicated to producing durable lighting solutions with state-of-the-art lighting technology for over 75 years.

BEGA and our sister company AUBRILAM – a specialist for wood products for outdoor use – manufacture items for worldwide deployment at six locations, employing more than 1300 staff.

Our subsidiary BEGA Middle East is your direct contact for unique, tailor-made projects. We will be at your side to find the very best solutions to fulfil custom requests and requirements.

About us and our luminaires

The reliable quality of BEGA luminaires is appreciated around the world, and especially where extreme temperatures and other environmental impacts produce the highest requirements. The comprehensive BEGA product portfolio includes lighting solutions for virtually any illumination requirements. Our outdoor furniture for urban and semi-public spaces is designed to create a consistent, unified look and ensure unchanging high quality.

Our priority has always been durability, resource conservation, efficient use of materials and sustainability in every single aspect. We conduct ongoing research and testing and work on improvements on our products in our efforts for continuous improvements.

All the components and the materials and finishes we use are designed to withstand environmental impacts long-term and reflect the latest technology standards.

We furthermore guarantee a minimum of 20 years of replacement parts availability for our products as an after-sales service.

BEGA Fanoos Collection

Trend meets tradition

The sun is setting, and the first lights flicker on – the atmospheric staging of your outdoor area has begun. The BEGA Fanoos Collection reflects the design of traditional Ramadan lanterns and combines traditional shapes with state-of-the-art lighting technology and premium quality materials.

The IP 65-protected luminaires are perfectly suited for outdoor use but will also feel right at home indoors. Their robust cast aluminium structure and the durable bronze-coloured BEGA surface finish make these luminaires highly resistant to environmental factors.

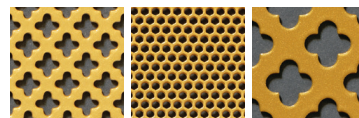

Our Fanoos lanterns are available in two basic shapes: In the round version, a borosilicate glass cylinder protects the luminaire body against dust and dirt, while the square variant is protected by safety glass.

The wall luminaires and bollards with outrigger arm as well as the pendant luminaires of the BEGA Fanoos Collection are optionally available with an additional downward light emission, which illuminates the area just below the luminaire to create beautiful, uniform lighting.

Customise your project:

- The mesh-like cutouts in the integrated metal sheeting can be adapted to suit custom requirements.
- A large selection of additional surface finish colours is optionally available.

Gold-colour details, brilliant light effects

The gold-colour coating of the integrated, mesh-like metal sheeting and the resulting atmospheric lighting create eye-catching focal points. The combination of 360° light emission and the warm white (2700 K) light colour ensures a well-balanced overall look.

Wall luminaires with outrigger arm

Unambiguous design,
atmospheric light

The wall luminaires of the BEGA Fanoos Collection create the basic illumination closest to the building. Intimately linked with some of the architectural elements of the structure, these luminaires are available with either a square or round basic shape. Both versions emit their light onto the installation surface as well – the uniquely developed, gold-coloured metal sheeting with its mesh-like hole pattern prevents glare. Robust wall mountings give the luminaires their appearance of floating in mid-air – a striking visual effect that becomes most captivating when the luminaires are switched on.

Both versions are optionally available with an additional downward light emission. The light distribution is asymmetrical.

Wall luminaire **round** 165 × 280 mm

Bollards with outrigger arm

A union of elegance and function

The bollards in the BEGA Fanoos Collection are a perfect choice for stylish and functional outdoor lighting that makes a statement. The lantern, which seems to float on the integrated outrigger arm, is a reminder of traditional styles, and at the same time representative of latest technology. The luminaire is optionally available in a round or square shape and suspended by a rectangular-shaped outrigger.

The luminaires blend seamlessly with their surroundings and become an essential guiding component along the footpaths around the building.

Both versions of the luminaire are optionally available with an additional downward light emission for more lighting flexibility on surface areas. The light distribution is asymmetrical

The luminaires from this series are optionally secured in the ground with an anchorage unit made of hot-dip galvanised steel or bolted onto an existing foundation using a screw-on base.

Bollards

Unambiguous design,
perfect guidance

The understated bollards in the BEGA Fanoos Collection combine the key aspects of functional and directional outdoor lighting. Their no-frills, linear shapes blend seamlessly with outdoor environments of modern or historical architecture, while providing unmistakable orientational lighting along footpaths and squares. The decorative, mesh-like metal sheeting of these luminaires offers a gold-coloured eye-catcher during the day and emits glittering light at night.

These luminaires are available as square or round versions, and their almost purist look will be a timeless and attractive addition to any outdoor area.

These BEGA bollards are equipped with an alignable mounting system. It can be bolted onto an existing foundation or a BEGA anchorage unit. Anchorage units are accessories and need to be ordered separately.

On-ground luminaires and pillar luminaires

Guiding the way with style

These purist, linear on-ground luminaires of the BEGA Fanoos Collection are a perfect example for elegant, orientational outdoor lighting at a low light point level. The intricate, mesh-like metal sheeting within the luminaires adds a striking gold accent by day and transforms into a captivating mosaic of light by night. Available in square or round designs, these ground luminaires evoke the look of lanterns placed along the path, adding a refined touch to any outdoor space.

We offer a connection housing as an accessory to meet any requirements at the installation site. The luminaires can therefore be installed on unpaved substrates.

Pendant luminaires

Light accents in mid-air

The pendant luminaires of the BEGA Fanoos Collection are perfect for elegant and decorative lighting and complement architectural features in their immediate vicinity. These luminaires are available as square and round models, allowing for a wide variety of design options. The lantern style provides 360-degree light emission, and the custom metal sheeting with a gold-coloured perforated pattern guarantees glare-free, decorative light distribution and striking reflections on surrounding surfaces.

Delivery includes one black cable suspension and one canopy in exterior colour. Both versions are optionally available with an additional downward light emission. The light distribution is symmetrical.
